vaulx

On-chain credit, secured by physical luxury collateral.

01 THE ASYMMETRY WE SOLVE

Asset-rich. Credit-trapped.

A São Paulo Rolex owner with a US$ 14,000 watch faces three credit options — all bad. Caixa Federal pawn lends 20% LTV at ~30% APR (scrap-metal valuation). A consumer loan starts at ~60% APR. A revolving credit-card balance hits ~400% APR. Meanwhile, on-chain USDC liquidity sits idle at 8% APR with no trustable rail to physical collateral.

CAIXA PAWN (20% LTV)	**~30% APR**
CONSUMER LOAN	**~60% APR**
CREDIT-CARD REVOLVING	**~400% APR**

02 WHAT IS VAULX

Vaulx is an on-chain credit protocol on Solana that connects asset-rich individuals in emerging markets with global on-chain liquidity — secured by physical luxury collateral (luxury watches first, then jewelry, gold, art) with deterministic on-chain liquidation.

We do not take custody. We do not hold capital. We orchestrate licensed counterparties — independent custodians, certified appraisers, Lloyd's-class insurance — and route the loan through Solana smart contracts that release USDC only after the custodian signs custody-confirmation atomically on-chain.

03 HOW IT WORKS

1. **Vault & appraise** (01) — Asset goes into licensed custody. Trilateral appraisal sets fair value. →
2. **Mint cNFT on Solana** (02) — Compressed NFT issued — embeds custody, appraisal, insurance, redemption rights. →
3. **Lock collateral** (03) — cNFT locked into Vaulx smart contract. Atomic gates verify custody on-chain. →
4. **Disburse USDC** (04) — USDC drawn from Solana LPs, paid to borrower. BRL via Pix on/off-ramp.

04 UNIT ECONOMICS

BORROWER

All-in APR (2% / month)	**24%**
LTV (vs Caixa 20% scrap)	**Up to 50%**
Term	**3-month, renewable**
vs credit-card revolving	**16× cheaper**

CAPITAL PROVIDERS

Senior tranche (USDC, fixed)	**8% APR**
Junior tranche (USDC, fixed)	**12% APR**
Vaulx protocol-owned first-loss	**5% buffer**
vs Maple syrupUSDC senior	**+100 bps**

VAULX REVENUE ~$300–600 per asset / year (6–12% of borrowed). Origination + servicing + curator fees.

05 WHERE MERCADO BITCOIN FITS

Vaulx has built the protocol, the custody layer, and the borrower funnel. To operate compliantly in Brazil at scale, we need a regulated counterparty. Three areas where MB and Vaulx could cooperate:

- **Regulated tokenization** MB issues the on-chain representation (cNFT) of the vaulted asset under its existing license.
- **Fiat rails · BRL ↔ USDC** MB acts as the primary on/off-ramp for borrower disbursement and repayment via Pix.
- **Yield product distribution** Vaulx senior tranche (8% USDC, physical collateral, insured) listed for MB institutional / retail.

06 INDICATIVE TERMS & SAFEGUARDS

INDICATIVE COMMERCIAL TERMS

Issuance fee to MB	**~R$ 200–500 / cNFT**
Net-revenue share on BR loans	**10–15% MB · 85–90% Vaulx**
BRL ↔ USDC settlement	**MB standard spread**
LP yield-product listing (opt.)	**20–30% rev-share on spread**
Pilot	**Non-exclusive · 60d · 10 watches**

WHAT PROTECTS THE PARTNERSHIP

- **Atomic invariant** No USDC disburses until custodian signs on-chain — same tx.
- **Independent licensed custody** Brinks / Loomis-class — not Vaulx, not MB.
- **Lloyd's-class insurance** Theft + damage to the trustee on every vaulted asset.
- **5% protocol-owned first-loss** Vaulx posts capital below LP tranches — we eat losses first.
