vaulx

Your assets. Liquid.

Solana-native lending against physical luxury assets.

George Dimitrov · Marcelo Coelho · Rodrigo Coelho · Felipe · Edson

01 · problem

Stranded collateral. Punitive credit.

Hundreds of millions own luxury assets the credit system won't price. Meanwhile Brazil runs the G20's worst lending spread.

40.22%

Brazil avg. lending APR (World Bank 2024)

13-30%

Effective LTV at Caixa pawn monopoly

~0%

Share of luxury collateral currently on-chain

LatAm alternative lending: $28B (2024) → $58B (2028). US pawn: $42B. Category is massive; on-chain share is zero.

Custody enforced in code.

Not in documentation.

```
require!(
    trdc.status == ACTIVE, CustodyNotConfirmed
);
```

The one line every RWA protocol promises. Only Vaulx enforces it in the vault.

A 90-day loan cycle. Fully on-chain.

Lenders yield

Unit economics

50%	2.2%	11%	4-6%
Loan-to-value	Monthly rate	Lender APY	Net platform margin

Default branch: extrajudicial recovery under CNJ 196/2025 → privileged auction to platform lenders. 90% recovery target at 50% LTV.

The three WHYs.

Team · timing · technology. Each load-bearing.

WHY US

Five axes.
Zero overlap.

Cross-European banking — 15+ years across 10+ markets. LTV, default structuring, credit risk — trained skills.

BR industrial credibility — Gitel, 38y, 60+ corporate clients. Partner-vault and institutional doors open.

BR sales + US crypto rails — Rodrigo ground-game, Felipe SP watch network + US VC.

Senior Solana engineer — Edson. Anchor, Bubblegum, PDAs. Code, not slides.

WHY NOW

Four tailwinds.
Aligned in 2026.

CNJ 196/2025 — extrajudicial recovery of movable assets now codified. Path didn't exist before.

Lei 14.905/2024 — cleared usury-law ambiguity for licensed lenders.

BRL on-chain liquidity — BRZ live, BRLV $13.5M from Paradigm, B3 native BRL for 2026.

RWA convergence — Goldman, BNY, UBS live on tokenized. Category no longer speculative.

WHY SOLANA

No other chain
makes this viable.

cNFTs sub-cent mint — every loan mints a TRDC. EVM economics break here.

400ms finality — custody-gate flip is real-time UX. Enables multi-program CPI.

Anchor constraint model — require!() is an account-level runtime invariant. Cleaner than EVM reverts.

Ecosystem capital gravity — stablecoin volume, RWA builders, Superteam. Counterparties live here.

Colosseum judges reward products that unlock something only Solana enables. Vaulx fits that test cleanly.

Five founders.

Five non-overlapping axes.

George Dimitrov	CEO · Vienna	15+y cross-European banking · LTV, default structuring, credit risk
Marcelo Coelho	COO · São Paulo	CEO Gitel · 38y industrial security, BR institutional access
Rodrigo Coelho	Head of Sales · São Paulo	BR sales + partner onboarding
Felipe	Strategic Advisor · US	SP watch-reseller network, US crypto rails, VC access
Edson	Lead Developer · BR	Senior Solana · Anchor, Bubblegum, PDAs

pre-seed ask

$750K

SAFE range $500K–$1M · $8M–$12M cap

H2 2026 — 400 CCBs, São Paulo beachhead

2027 — 1,500 CCBs, BR validation + LatAm

2028 — 3,000 CCBs, LatAm expansion

Seed $1.5–3M triggered by validation, not runway
