

BUSINESS MODEL OVERVIEW

EXECUTIVE OVERVIEW · BOARD DECK · COLOSSEUM FRONTIER

GarantiFi

RWA/DeFi Protocol on Solana · Credit collateralized by physical luxury assets · Brazil ⇒ LatAm ⇒ USA

SECTOR	NETWORK	STAGE	TARGET Y1 · BASE
RWA · Collateralized Lending	Solana · Mainnet Beta	MVP Devnet V2.6 Triangular	400 CCBs · US\$ 1,6M TVL R\$831K revenue

01

Value Proposition

Three stakeholders, one edge: superior LTV with on-chain transparency

FOR THE BORROWER

Liquidity without selling the asset — ownership retained after repayment

> LTV **50-60%** vs. 20-30% from traditional pawn

> Accepts credit-negative borrowers — financial inclusion through collateral

> Choice: BRL stablecoin or USDC directly to wallet

> Rollover without new appraisal or logistics

FOR THE DEPOSITOR (LP)

Yield on stablecoins backed by overcollateralized physical assets

> On-chain transparency for each loan state

> Competitive rates in the DeFi/RWA space

> Overcollateralization at 167% (LTV 60%)

> Dual-token: USDC + BRL parameterized

CUSTODIAN / APPRAISER

New source of recurring demand + digitization via API/webhook

> Recurring appraisal flow (online + offline)

> Clear SLA · volume-based compensation

> Scalable Triangular Model V1.2

> No investment in proprietary technology

02

Market & TAM

TAM / SAM / SOM with verified sources · 2024–2028

TAM · TOTAL ADDRESSABLE

LatAm Alternative Credit

US\$ 57,8B

SAM · SERVICEABLE

Pawn + asset-backed lending BR

R\$ 2–6B

SOM · OBTAINABLE

Year 1 · SP + watches/jewelry

R\$ 3–7,5M

RWA Global: US\$2T (McKinsey 2024) to US\$9.4T (BCG/Ripple 2025). LatAm alternative credit CAGR: **~19.6%**.

Brazil is #5 globally in crypto — **30M+** users and US\$318.8B in volume traded Jul/24–Jun/25, ~90% in stablecoins.

03

Competitive Analysis

Only DeFi protocol accepting physical movable assets as collateral

ASPECT	CAIXA (PAWN)	BANKS (CDC)	GARANTIFI
LTV offered	20-30%	No physical collateral	50-60%
Interest rate	20-26% a.a.	40-150% a.a.	18-24% a.a.
Disbursement	1-3 business days	3-15 business days	24-72h post-custody
Coverage	~900 branches	National	National (digital + logística)
Requires	In-person, banking hours	Credit score + proof of income	Solana wallet + appraised asset
Transparency	Paper contract	Digital contract	On-chain · auditable

04

Revenue Structure

Three sources across the loan lifecycle

01 · Origination

Taxa de abertura

2–3%

Sobre o principal, no desembolso. Cobre avaliação, logística, mintagem cNFT e gas fees.

02 · Interest

Spread líquido

8–12%*a.a.*

Borrower rate 18-24% p.a. minus cost of capital 6-12%. Simple linear interest, accrued on-chain.

03 · Liquidation

Fee de default

5%

On sale value in case of default. Target: defaults < 5% of portfolio — not a desirable revenue source.

05

R\$ 900K–1,1M

Operational breakeven

Reached in H2

▲ Operational breakeven requires ~1,200 CCBs/year at R\$20K ticket or ~800 with 60% rollover. CLV 1yr (1 cycle + 3 rollovers) = R\$2,865/client. Main lever: cycle 2+ without appraisal lifts margin from 16.8% to ~26%.

06

Collateral Categories

What to accept when — operational vs. technical

🕒 MVP Luxury Watches 50–60% Chrono24 / WatchBox · standardizable market · simple vault	💎 MVP Jewelry 40–55% Metal + GIA gemology · semi-standardizable · simple vault	🖼️ PHASE 1 Art (paintings) 30–45% ABEF appraiser + provenance · climate-controlled custody	🚗 PHASE 1 Vehicles 50–65% FIPE table · standardizable · secure garage + insurance	📦 FASE 2 High-value NFTs 30–50% On-chain oracles · PDA custody · hybrid collateral
--	--	--	---	--

07

Loan Flow

Five phases — onboarding to settlement · 5–125 days

PHASE 1

1

Avaliação & Onboarding

1-3 dias · off-chain

Tomador submete ativo via dApp. Laudo online (24h) + offline (48h). Admin define LTV e prazo.

PHASE 2

2

Custody

1-2 days

In-person delivery to custodian. Admin mints cNFT with report hash (IPFS/Arweave). Status: ACTIVE.

PHASE 3

3

Disbursement

< 1 min · on-chain

LoanAccount created. cNFT to PDA. Vault Program disburses USDC or BRL stablecoin via CPI.

PHASE 4

4

Active Term

90-120 days

Interest accrues incrementally. Cron bot checks maturities. BRL depeg monitor every 5 min.

PHASE 5

5

Settlement

three paths

Repayment → cNFT burned · Rollover → NFT stays in PDA · Default → liquidation via multisig.

08

Strategy by Phase

Bootstrap → Validation → LatAm → USA · asset-light model

10

Business Roadmap

Milestones by phase · April 2026 → 2028+

APR-MAY 2026	Hackathon Colosseum Frontier MVP Devnet deployed. Triangular Appraisal V1.2 documented (Online Report R\$215 + Offline R\$450). Colosseum pitch day.
JUN-AUG 2026	Pre-seed · Legal & Operational Setup Legal opinion. Signing custodian + appraiser network (online + offline) in SP. SCD partner prospecting.
SEP-NOV 2026	Seed · Mainnet Beta SP Smart contract audit. Mainnet Beta in SP deployed. Target 20-50 CCBs/month. NPS baseline collected.
DEC 26 – JUN 27	BR Validation · 400+ CCBs NPS > 80 confirmed. CLV R\$2,865 validated. CAC R\$350-500 stabilized. LatAm expansion trigger.
2026-2027	LatAm Expansion · Asset-Light Colômbia · México · Panamá · Peru · Chile. R\$ 10-45K/país . Zero custo fixo incremental. Playbook 6-10 weeks/country.
LATE 2027	US Entry · Miami + NYC Pawnbroker license FL/NY . Market US\$8.6B → US\$45.6B by 2030. Local compliance. Miami pilot first.
2028+	Global Scale · RWA Infrastructure Remaining LatAm + Europe. On-chain default marketplace . Portfolio securitization. VaaS API for third parties.

11

Future Revenue

12 identified opportunities · 5 layers · from float to rotating credit

LAYER 1

Direct extensions of current model

Immediate · V2

01

Yield on float (Kamino/MarginFi): \$40-80K/ano ·

02

Rollover fee 0.5%: R\$ 18-52K/ano ·

03

On-chain default auction: per-event variable

LAYER 2

Vault as infrastructure (B2B)

Mid-term · V3

04

Vault-as-a-Service (VaaS) for third parties: R\$ 60-240K/ano ·

05

NFT custody-as-a-service (CaaS) — partner-scaled

LAYER 3

Data & On-chain Reputation

Mid-term · V3

06

Asset Score — B2B API: R\$ 50-200K/ano ·

07

Borrower Score (on-chain reputation): to be priced

LAYER 4

Asset Financialization

Mid/Long-term

08

NFT fractionalization (CVM analysis) ·

09

Integrated on-chain insurance: R\$ 20-80K/ano ·

10

On-chain portfolio securitization — transformational

LAYER 5

Product Expansion

Long-term · V4

11

Rotating credit line by borrower history ·

12

Hybrid digital collateral (SOL/jitoSOL/mSOL)

STRATEGIC INSIGHT

What sets GarantiFi apart is not the Solana technology — it's the combination of superior LTV, on-chain transparency, and local partner network. Rollover is the margin lever. Each cycle 2+ adds R\$750 in CLV without a new appraisal.

R\$ 2.865

CLV 1YR POR CLIENTE

"Breakeven at 800 CCBs with 60% rollover. Above that, the model scales with increasing margin — each additional country is asset-light."
