

COLOSSEUM FRONTIER 2026

GarantiFi

Physical assets · on-chain credit · Brazil to LatAm

\$2T+

RWA GLOBAL MARKET

50–60%

LTV VS 20–30% PAWN

#5

BRAZIL IN GLOBAL CRYPTO

GarantiFi converts luxury movable assets into auditable Solana-native collateralized credit.

PROBLEM

R\$318B in assets sit idle. Credit remains slow, expensive, exclusionary.

Asset-rich borrowers in Brazil still depend on pawn rails and bank underwriting built for paper processes, not liquid collateral.

Traditional banks

Require credit score and proof of income. Borrowers with luxury assets but weak formal credit are excluded. Consumer credit often ranges from 40–150% p.a.

Pawn shops

Offer only 20–30% LTV, require in-person handling and paper contracts, and create friction for premium borrowers using high-value goods.

Current DeFi

Accepts only on-chain collateral. Physical movable wealth remains invisible to crypto liquidity markets.

Example: a R\$60,000 watch in a safe produces no liquidity, no yield, and no on-chain credit history.

SOLUTION

The first DeFi protocol that turns physical luxury assets into on-chain credit.

5-step collateral flow

- 1 Asset submitted in dApp**
Online appraisal within 24h or in-person validation within 48h.
- 2 Custody + cNFT mint**
Asset report hash stored on IPFS/Arweave, cNFT locked on Solana.
- 3 Stablecoin disbursement**
USDC or BRL stablecoin sent on-chain after custody confirmation.
- 4 Active loan term**
90–120 day loan, on-chain accrual, depeg and maturity monitoring.
- 5 Repay, rollover, or liquidate**
Return asset, extend without full reappraisal, or run controlled liquidation.

Why Solana

Compressed NFT collateral proof

Cost-efficient representation of a physical asset's appraisal, status, and custody history.

RWA ecosystem tailwind

GarantiFi enters while Solana is scaling real-world-asset infrastructure and lending demand.

Economics fit ticket size

Low transaction costs matter when average initial ticket is around R\$20K.

167% overcollateralization

At 60% LTV, every \$1 lent is covered by roughly \$1.67 of asset value.

MARKET AND MOAT

Large market. Empty category.

\$9.4T

TAM · GLOBAL RWA PROJECTION

\$57.8B

SAM · LATAM ALTERNATIVE CREDIT

R\$2–6B

SOM · BRAZIL PAWN / ASSET-BACKED LENDING

Brazil's crypto penetration and stablecoin usage make it the right launch market for a bridge between physical collateral and on-chain capital.

Competitive position

DIMENSION	CAIXA	BANKS	GARANTIFI
LTV offered	20–30%	No physical collateral	50–60%
Rate	20–26% p.a.	40–150% p.a.	18–24% p.a.
Disbursement	1–3 days	3–15 days	24–72h
Credit score needed	Yes	Yes	No
Transparency	Paper	Digital	On-chain

Core moat: not just Solana tech, but the combination of custody network, appraisal workflow, higher LTV, and digital borrower experience.

BUSINESS MODEL

Clear monetization, strong rollover economics, scalable expansion model.

Revenue streams

2–3%

ORIGINATION FEE

Charged at disbursement. Covers appraisal, logistics, cNFT minting, and gas.

8–12%

NET INTEREST SPREAD

Borrower rate minus cost of capital.

5%

LIQUIDATION FEE

Applies only on default. Not the target driver.

Unit economics

R\$2,865

1-YEAR CLV

R\$350–500

BLENDED CAC

>5x

CLV / CAC

~26%

CYCLE 2+ MARGIN

Year 1: 400 loans, \$1.6M average TVL, R\$831K gross revenue.

Year 2: 1,000–1,200 loans, \$4–5M TVL, operational breakeven in H2.

TEAM AND ROADMAP

Founder-market fit is real.

Marcelo Coelho

CEO at Gitel. Operator with execution capacity and commercial credibility in Brazil.

Rodrigo

Operational partner supporting local rollout, processes, and coordination.

Fernando

Wall Street and Boston finance background. Brings structured finance discipline.

Project lead

15+ years in banking and finance, plus crypto/web3 experience. Strongest face for investor and hackathon narrative.

Roadmap

APR–MAY 2026

Frontier hackathon, MVP on devnet, appraisal model documented, initial narrative and demo.

JUN–NOV 2026

Pre-seed close, legal setup, custodian and appraiser network, São Paulo mainnet beta.

DEC 2026 – JUN 2027

Brazil validation with 400+ CCBs, NPS above 80, stable CAC and CLV proof.

2026–2027

Asset-light LatAm expansion into Colombia, Mexico, Panama, Peru, and Chile.

LATE 2027 ONWARD

US entry via Miami and NYC, then broader RWA infrastructure and securitization layers.

THE ASK

\$250K to turn a category-defining prototype into market infrastructure.

The grant funds the transition from devnet concept to production rollout: audit, legal and custody stack, borrower acquisition, and Brazil launch readiness.

\$250K

PRE-SEED ASK

Bridge from prototype to audited launch and initial portfolio growth.

400+

TARGET CCBS

Brazil validation milestone before broader LatAm rollout.

5+

LATAM COUNTRIES

Expansion through local partner networks, not heavy capex.

Why GarantiFi can win

It fits the Colosseum rubric: strong founder-market fit, credible business model, clear market wedge, live MVP narrative, and a category that only makes sense because crypto can make physical collateral programmable.

Colosseum Frontier submission objective: accelerator admission and \$250K pre-seed, not just hackathon cash.
